AJ SMART BIZ · DOCUMENT 03

Functional Specification (FRS)

Every module, screen and feature of the five applications, and how they behave.

Audience	Product, QA, support, developers
Version / date	1.0 · 7 November 2026
Related	02 BRD · 06 API Reference · 09 User Manual

Contents

1. Functionality catalogue (sellable features)
2. Super Admin console
3. Company Admin workspace
4. Tenant website (themes)
5. Product website (Technology)
6. Cross-cutting behaviour

1. Functionality catalogue

Sellable features are listed once, in `FUNCTIONALITY_CATALOGUE` (`Aj-Smart-Biz-Backend/src/constants/index.js`). A plan grants keys; the tenant switches them on; the platform serves them while the plan runs.

Key	What it gives the tenant
`whatsapp`	Typed WhatsApp numbers (inquiry, contact, support, orders) and buttons across the site, floating chat bubble.
`share_link`	Share button: native share sheet on phones, chosen channels elsewhere.
`services`	Services band on home and a /services page with categories, prices and enquiry buttons.
`service_enquiry`	Enquiry form on services, routed to WhatsApp and/or the Service Leads inbox.
`service_booking`	Slot booking on bookable services with capacity, diary and accept/decline.
`about_us`	Tenant-written About page; without it a factual fallback is built from the profile.
`figures`	Stat cards — fixed values or counted from a date ("years in business").
`team`	Team section on /about.
`gallery`	Gallery of the company's own photographs.
`contact_page`	/contact page with tenant wording, hand-off form and locations.
`testimonials`	Static wall or dynamic with visitor submission and moderation.
`features_benefits`	Features/Benefits band with icons chosen from the platform library.
`products`	Catalogue: categories, products, offers, /products, /categories, /offers.
`orders`	Cart and order desk on top of products (withheld without products).
`warehouse`	Warehouses, stock levels, ledger, transfers, stock analytics.
`customers`	Customer sign-in with phone OTP, addresses, history.
`blog`	Journal with scheduled publishing, tags, pagination.
`social_media`	Social profile links in header/footer.
`invoices`	Counter billing (POS) with stock deduction and analysis.

> **Granted vs switched on vs published**
>
> A feature can be *granted* (plan), *enabled* (tenant), *served* (plan running). The console additionally reports `published: false, reason: "empty"` when a live feature has no content yet, and shows "Nothing published yet — Add content →".

2. Super Admin console (:4200)

Audience: platform owner and staff. Sign-in with email and password (`/auth/super-admin/login`). No per-menu permissions; the root account is protected.

Menu	Route	Functions
Dashboard	/dashboard	Companies active/inactive/deleted, total and monthly income with growth, 12-month income chart, companies by plan, recent companies and transactions.
Company Management	/companies, /companies/new, /companies/:id, /:id/edit	List with search and filters (business type, plan, status); create (profile, login branding, address, main admin, plan + payment, duplicate-from, AI content creator); detail tabs: overview, business insights, customers, branches (with quota), domains, plan & transactions (suspend/resume/start now/auto-renew/cancel), storage limit override, admins (edit, reset password); sample companies.
Company Plans	/subscriptions, /subscriptions/:id	Renewal desk: quick views (Running, Expiring 7/30 days, Scheduled, Suspended, Expired, Cancelled, All), plan-request queue (approve/reject), run expiry check, companies per plan; term detail with history, payments and lifecycle actions (suspend, resume, cancel, expire, start now, reactivate, extend, auto-renew).
Customers	/customers	Read-only list of every tenant's customers with summary.
Lead Management	/leads, /leads/analytics, /leads/:id	Cross-tenant website visitors (read-only), company filter, analytics, visit history.
Plan Management	/plans	Plan cards: price, discount, cycle, duration, trial, quotas, marketing features, granted functionalities, popular/public/show-in-admin flags.
Super Admins	/super-admins	Platform staff accounts, password reset; root protected.
State / Business Types / Theme Management	/states, /business-types, /themes	Master data CRUD; themes with palette preview.
Our website → Content	/website/content	JSON editor for the product website's sections (hero, steps, promises, pages…).
Our website → Templates	/website/templates	Which demo companies appear on the product site's template showcase, by design.
Our website → FAQ	/website/faq	FAQ CRUD and ordering.
Our website → Enquiries	/website/enquiries	Demo/contact enquiries: status new → contacted → converted/closed, notes.
Our website → Leads / Campaign Analysis	/website/leads, /website/analytics	Marketing-site visitors linked to enquiries; first-touch UTM campaign report.

Menu	Route	Functions
Profile	/profile	Own profile and password.

3. Company Admin workspace (:4300)

Audience: a company's admins. The login screen brands itself from the domain (`/theme/branding`). After sign-in, `/auth/me` returns the user, a permission map and the menu tree; the sidebar renders exactly that tree. First sign-in with a generated password forces a password change.

3.1 Company Details (website and profile)

Submenu	Route	Plan grant	Functions
Company profile	/company/profile	—	Company record, logo, favicon (.ico), description; editable by main admin.
Branches	/company/branches, /company/branches/:id	—	Branch CRUD within quota, own logo/favicon, contacts (primary flag). Own permission row.
Domains	/company/domains	—	Hostnames, branch pin, primary flag.
Theme	/company/theme	—	Primary, secondary, accent colours and mode for company or one branch; reset to preset.
Functionality	/company/functionality	—	One card per feature: switch (locked with reason if not granted), settings panel, WhatsApp numbers.
Slider	/company/sliders	—	Hero slides, desktop + mobile image, CTA, company-wide or per branch, reorder.
Services / Service categories	/company/services, /company/service-categories	services	Service cards (photo or icon, inclusions, price line, price/offer, duration, booking settings, featured), section wording, menu name, enquiry target.
Categories / Products	/company/categories, /company/products	products	Three-level tree with product counts; paged catalogue with up to 8 images, price/offer/label, specs, stock status, orderable flag, tabs On offer/Featured/Hidden; live price preview.
Cart & orders	/company/orders	orders	Mode (WhatsApp / payment / none), basket on/off, required fields, minimum order, UPI id or payment link.
Blog	/company/blog	blog	Posts with cover, tags, author, publish date; states live/scheduled/draft/hidden.

Submenu	Route	Plan grant	Functions
About us / Figures / Team / Gallery	/company/about, /figures, /team, /gallery	about_us, figures, team, gallery	Per-branch or inherited copy; figures fixed or since-date; cards with reorder and “Shows on” branch.
Contact page	/company/contact	contact_page	Eyebrow, heading, intro, show form, target (email/WhatsApp), show locations, menu name.
Features / Benefits	/company/features	features_benefits	Cards with icon picker; section heading and button.
Social	/company/social	social_media	Social profile links.
Testimonials	/company/testimonials	testimonials	Static or dynamic mode, moderation queue (pending/approved/rejected), cards.
Plan & billing	/company/subscription	—	Subscriptions and transactions, read-only.

3.2 Operations

Menu (slug)	Route	Functions
Dashboard	/dashboard	Admins, branches, roles, current plan with days left, quota usage, live features, storage.
My Plan (my-plan)	/plan	Countdown, limits vs usage (“3 of 5 admins”), features sold, booked renewal, payments; plan catalogue with Upgrade/Downgrade labels; request a change (one open at a time).
Lead Management (lead-management)	/leads, /leads/analytics, /leads/:id	Visitors per device, traffic sources, stage and notes editable.
Service Leads (service-leads)	/service-leads	Enquiry and booking inbox; stage, notes, accept/decline booking, payment; diary by date; revenue; analytics. No create; visitor input not editable.
Orders (orders)	/orders	Queue with status and payment filters; move status forward; mark paid/refunded; warehouse, delivery adjustment and internal notes editable; analytics tab (7/30/90/365 days).
Warehouse (warehouse)	/warehouse	Tabs: stock (low/out filters, reorder level, bin), warehouses (one default), movements ledger (receipt, damage, count…), transfers, analytics (retail and cost value with coverage).
Customers (customers)	/customers	List with spend, detail with addresses and orders, bar/unbar, delete; no create; phone not editable.
Invoices (invoices, invoices-all, invoice-analysis)	/invoices, /invoices/all, /invoices/analysis, /invoices/new, /invoices/:id, /:id/edit	My invoices with today/month totals; all invoices with creator filter; editor (products, line discounts, tax 0/5/12/18/28 %, bill discount, round-off); issue; record payment (partial); cancel; printable bill; analysis by product, admin, payment mode, branch.

Menu (slug)	Route	Functions
Role Management	/roles	Roles CRUD, admin count per role.
Menu Permission	/menu-permissions	Role × menu grid with view/create/edit/delete/export; company-own menus CRUD; platform menus read-only.
Admin Management	/admins	Admins within quota, role and branch, reset password, toggle.
Profile	/profile	Own profile; forced password change (?force=1).

4. Tenant website (themes)

Three designs — **default** (light, cream, charcoal and brass), **midnight** (dark, gold, arches; salons), **atelier** (glass panels over gradient; decor/framing) — with identical logic. Tenant brand colours override the design's brand tokens.

Page	Content	Shown when
/	Hero slider, service categories, services, service offers, product categories, product offers, products, Features/Benefits, testimonials (+ review form), blog, figures, closing CTA.	Each band only if its feature is live and has content.
/services, /services/[slug]	Service menu with category filter; detail with price, duration, booking panel or enquiry button.	services
/products, /products/[slug]	Catalogue with category filter; detail with no-JS photo gallery, price, stock label, Add to cart / Order now.	products
/categories, /offers	Category tree; products on offer.	products + content
/blog, /blog/[slug]	Archive with tags and pages; article with previous/next.	blog
/about	Story, figures, team, gallery.	Always (fallback copy from profile).
/contact	Wording, hand-off form (email/WhatsApp), branch locations.	contact_page
/account, /account/orders, /account/services	OTP sign-in/sign-up, profile, addresses, order history, bookings history.	customers

Special states

- **ServiceUnavailable** — the API cannot be reached.
- **CompanyNotFound** — the domain belongs to no active tenant.
- **PlanNotice** (holding page) — plan expired, suspended or never assigned; noindex.

Cart behaviour

- Basket held in the browser (`ajsb.cart.v1`) as line snapshots.

- Submission sends product ids and quantities; the API returns order number, total and WhatsApp/payment hand-off.
- Basket off → "Order now" sends one product at once. Out-of-stock or non-orderable products show no button.

5. Product website — Technology (:4700)

Page	Purpose
/	Hero, steps, capabilities, promises, templates showcase, business types, plans, FAQ, CTA.
/services	Everything included plus detailed capability catalogue and recharge pitch.
/plans	Public plans with pricing, compare table, FAQ.
/templates	Demo tenant sites by design with live demo links.
/demo	Free demo request form (pre-selects ?plan=).
/about, /contact	Company story; contact cards and form.
SEO routes	/sitemap.xml, /robots.txt, /manifest.webmanifest, /opengraph-image.

All copy is served by `GET /website/bootstrap` and edited in the Super Admin's *Our website* section. Forms post to `/website/enquiries`, then offer WhatsApp/mailto hand-off even if the API failed.

6. Cross-cutting behaviour

Behaviour	Specification
Lists	Paged (10/25/50/100), search debounced 350 ms, sortable columns, status filter; envelope `meta {total, page, limit, totalPages, hasNext}`.
Status toggle	Every entity active/inactive via `PATCH /:id/status`.
Delete	Confirmation dialog; soft delete; restore where offered.
Reorder	Whole ordered list sent in one `PATCH /reorder`.
Uploads	Image MIME only; favicons validated as real ICO; per-company storage limit; replaced files deleted.
Errors	Toast with the API's message; field errors under fields; 401 → sign out; server down → full-screen retry.
Dark mode	Both consoles toggle light/dark, remembered per browser.
Tracking	Websites send a beacon per page view (device id, session, UTM, device, optional geolocation) via their own `/api/track`.
