User Manual

Step-by-step guides for platform operators, company admins and their staff.

Audience	Super admins, company admins, company staff, support team
Version / date	1.0 · 7 November 2026

Contents

1. Getting started
2. Part A — Super Admin guide
3. Part B — Company Admin guide
4. Part C — Staff daily operations
5. Part D — What website visitors see
6. Troubleshooting and FAQ

1. Getting started

You are	Open	Sign in with
Platform owner / staff	Super Admin console (smart-biz-super-admin…, :4200 locally)	Email + password given by the platform owner
Company admin / staff	Company workspace (smart-biz-admin… or your own domain, :4300 locally)	Email + password from your main admin or the platform

Both consoles have a light/dark switch, a profile page for changing your password, and show a “Cannot reach the server” screen with a *Retry* button if the API is down.

Part A — Super Admin guide

A1. Create a plan

1. Go to **Plan Management** → **Add plan**.
2. Enter name, code, price (and discount price), currency, billing cycle, duration and trial days.
3. Set quotas: max branches, max admins, users, storage MB.
4. Tick the **functionalities** the plan grants (website sections, products, orders, warehouse, invoices…).
5. Choose *Public* (shown on the product website), *Show in admin* (tenants may request it) and *Popular*. Save.

> **Editing a plan is safe**
> Running subscriptions keep the terms they were sold (snapshot). Changes apply to new terms only.

A2. Onboard a company

1. **Company Management** → **New company**.
2. Fill the profile (name, business type, contact, address, GST/PAN), login branding (logo, favicon, description).
3. Main admin: name, email, phone; leave the password empty to generate one.
4. Choose the starting plan and record the payment (mode, reference).
5. Optional: *Duplicate from* an existing company (website, services, products, blog, testimonials, branches, roles).
6. Save. **Copy the generated admin password now** — it is shown only once.
7. Open the company → **Domains** and add its website host. Ask DevOps to add the nginx vhost (Document 07).
8. Optional: **AI content creator** on the company form drafts slides, About, Contact, benefits, services, products and blog posts. It never overwrites existing content.

A3. Manage renewals — Company Plans

Action	When to use
Assign	First plan; a future start date queues it as pending.
Pre-renew	Book the next term to start when the current ends.
Renew now	Close today and start a new term.
Upgrade / downgrade	Mid-term change; the dialog shows the credit for unused days before you confirm.
Suspend / resume	Stop access temporarily without losing dates or money.
Extend	Push the end date out at no charge.
Cancel / expire	End the term (final).

Action	When to use
Reactivate	Open a fresh term for a finished subscription.
Run expiry check	Apply due starts/expiries immediately instead of waiting for the hourly run.

Plan requests from tenants appear at the top of Company Plans. *Approve* applies, bills and closes the old term; *Reject* with a note. The tenant sees the decision on My Plan.

A4. Other platform tasks

- **Dashboard** — income this month and growth, companies by plan, recent transactions.
- **Customers / Lead Management** — read-only, all tenants.
- **Super Admins** — add staff (role *staff*), reset passwords. The root account cannot be removed.
- **Masters** — states (with GST code), business types, theme presets.
- **Our website** — edit the product site's content, FAQ and template showcase; follow up enquiries (new → contacted → converted/closed); campaign analysis by UTM.

Part B — Company Admin guide

B1. First sign-in

1. Sign in with the email and password from the platform.
2. You are taken to **Profile** to set your own password — required before anything else.
3. Check **Dashboard** and **My Plan** for your plan, days left and limits.

B2. Set up your website

1. **Company Details** → **Company profile**: logo, favicon (.ico), description, contact and address.
2. **Theme**: pick primary, secondary and accent colours (for the whole company or one branch).
3. **Functionality**: switch on the features your plan includes. A locked switch tells you why (not in plan, expired…). Add WhatsApp numbers by type (inquiry, contact, support, orders) — one *contact* number is enough to make every button work.
4. **Slider**: replace the three default slides with your own (desktop and phone images, button text and link).
5. Fill each section you switched on: **About us, Figures, Team, Gallery, Features/Benefits, Testimonials, Contact page, Social, Blog**. A section stays off the website until it has content — the banner says "Nothing published yet".
6. Rename pages in the menu with the *Menu name* field on About, Contact and Services.

> **Branch websites**
>
> Use the *Editing for* / *Shows on* selector to give a branch its own About, team, slides or colours. A branch with nothing of its own shows the company-wide content.

B3. Catalogue, services and orders

1. **Categories**: build up to three levels (e.g. Furniture → Tables → Dining tables).
2. **Products**: name, up to 8 photos (first is the card image), price, optional offer price (discount is calculated), or a free-text price label ("On request"), specifications, stock status, *Orderable*.
3. **Cart & orders**: choose where orders go — WhatsApp, Payment (UPI id or link) or None; basket on/off; required fields; minimum order.
4. **Service categories / Services**: cards with photo or icon, "what's included", price line, duration; make a service *bookable* with opening hours, slot length and capacity; choose where enquiries go (WhatsApp and Service Leads, Service Leads only, WhatsApp only).

B4. Team access

1. **Role Management** → **Add role** (e.g. "Counter staff").
2. **Menu Permission**: choose the role, tick View/Create/Edit/Delete/Export per menu, save.
3. **Admin Management** → **Add admin** with that role and branch. If the button is disabled, the bar above explains the plan limit and offers *Upgrade your plan*.

B5. Change plan

My Plan lists plans marked Upgrade or Downgrade. Choose one and send a request with a note. Only one request can be open; you can cancel it. The platform's decision appears on the same screen.

Part C — Staff daily operations

C1. Orders

1. **Orders** lists new orders as *Pending*.
2. Move each forward: **Confirm** (stock is reserved) → **Packed** → **Dispatched** (stock leaves the warehouse) → **Delivered**.
3. Mark **payment** separately (unpaid / paid / refunded).
4. Mistake? **Cancel** (stock goes back) — orders never move backwards and cannot be deleted.
5. Totals reading "plus N items to be quoted" include products priced in words.
6. The *Analytics* tab shows sales for 7/30/90/365 days (cancelled orders excluded).

C2. Warehouse

- **Warehouses**: one is the default; others can serve a branch.
- **Movements**: record receipts (purchase), returns, damage, and stock counts (enter *how many there are now*).
- **Transfer** stock between warehouses.
- Stock is never edited directly — corrections are new movements, so the history stays complete.
- Products with stock tracking show in/out of stock on the website automatically.

C3. Invoices (counter billing)

1. **Invoices** → **New**: add products, quantities, line discounts and tax rate (0/5/12/18/28 %), bill discount.
2. **Save draft** to finish later, or **Issue** — stock is deducted and an invoice number assigned.
3. Record payment (cash, UPI, card, bank, credit) — partial payments are allowed.
4. Print the bill from the invoice page. Cancelling an issued invoice returns stock.

C4. Service leads and bookings

- Each enquiry/booking shows who, which service, and whether they were also sent to WhatsApp — check before calling.
- Move the *stage* (new → contacted → qualified → converted / lost) and add notes.
- Accept or decline booking requests; use the *Diary* to see a day's bookings.

C5. Customers and leads

- **Customers** sign up themselves on the website; you can view spend, addresses and orders, or bar a customer (their orders remain).
- **Lead Management** shows website visitors per device with source and pages; set a stage and notes.

Part D — What website visitors see

- A home page with your slides and every section you have published.
- Products with photos, prices and offers; *Add to cart* or *Order now*, then WhatsApp or payment.
- Services with *Enquire* or a booking calendar.
- Sign in with phone number and a 6-digit code to save addresses and see orders and bookings.
- If your plan lapses, a branded “back shortly” page replaces the website until it is renewed.

Troubleshooting and FAQ

Question	Answer
A menu is missing from my sidebar.	Your role lacks View on it, or your plan does not include that feature.
“Add branch/admin” is disabled.	Plan limit reached, or the plan is expired/suspended/missing — the reason is on the button.
I switched a feature on but the website doesn't show it.	Add content to it — empty sections are not published.
Website shows “offline / back shortly”.	The plan is not running; contact the platform to renew.
Customer didn't receive an OTP.	SMS is not connected yet; the sign-in page shows the development code.
Can I edit an order's items or price?	No. Cancel and ask the customer to re-order; you may edit warehouse, delivery adjustment and notes.
I can't change a customer's phone.	The phone is the customer's identity and sign-in; it cannot be edited by staff.
Session expired message.	Sign in again; tokens expire daily.
